

Vision Therapy

Features designed for vision therapists.

- Recurring Appointment

- Integrated Letters

- Integrated Evaluation Reports

- VT Medical Records

Does

your office specialize in behavioral and developmental vision care, vision therapy, or visual rehabilitation? Tired of using a software that was obviously not designed for your office and its practice management needs? Crystal Practice Management is the total software package that enables your practice to easily perform all essential practice management functions.

The customizable medical records alone have made us the ideal choice for offices to record patient data and track a patient's progress. From a patient with glaucoma to a post surgery follow up visit, design your own medical record or use one of our numerous vision therapy templates. Record the information you need and streamline your exams.

Our scheduling also takes into account the needs of recurring patients. Recurring appointment scheduling has been one of our most popular and time saving features for vision therapists. It allows a patient to be scheduled for the same time slot instantly. Put your patients on a

daily, weekly, or monthly schedule with the click of a button. It's that simple.

Another feature vision therapists have given Crystal Practice Management rave reviews about is the integrated evaluation reports. This time-saving feature gives offices the ability to improve communication with their patients. Whether it is sending a referral to another doctor, handing an evaluation report to your patient, or providing a doctor's note for a student, our letter integration module helps connect you to your patient's needs.
