m’eyeFit® mirror setup for Crystal® Integration

9) Click Add

10) Exit out to home screen, take measurements, and export files.
Office’s Computer Configuration Setup*

* If customer is using thin clients or server as their computer, see steps at the end of these instructions.

Please verify if the customer is already setup with VisionWeb™

1) Log into Crystal®

2) Click on Configuration

3) Select Visioffice®

4) The screen will disappear, click on Configuration again, screen should look like this:

5) Click on Edit ini file
m’eyeFit® mirror setup for Crystal® Integration

6) Scroll to the bottom of the page and locate **ZFApiPath** and **ZFEmrPath**

7) Enter the path of the OMA folder. In this case it would read like this:

   - **ZFApiPath**: `\C:\OMA`
   - **ZFEmrPath**: `\C:\OMA`

   It should look like this:

![Notepad window with paths](image)

8) Click the X and it will ask you if you want to Save. Click Yes and Close.
9) From the **Main Screen** click on **Patient**

10) Type in **Test** or a **name of a patient** so the import path can be set. Then click **Go.**
