

Optomap Retinal Exam

At Envision Ghent Optometry, we pride ourselves on providing our patients with the best possible standard of care. Dr. Cassis recommends the Optomap Retinal Exam for all of our patients. This non-invasive procedure allows her a broader more detailed view of the retina which cannot be seen with more conventional methods. When reviewed, the scan becomes a permanent part of your medical file, enabling Dr. Cassis to make important comparisons should potential vision threatening conditions show themselves at a future examination. The doctor strongly believes that the Optomap Retinal Exam is an essential part of your comprehensive eye exam and recommends it once a year.

Due to Covid 19 we have implemented some standards in our procedures that enhances the patient experience and speeds up your office visit and time waiting in the office. With the optomap images, we are able to diagnose quicker and provide you a detailed comprehensive image without the need to dilate and avoid a 30 min wait to leave the office. This will help avoid multiple interactions with different techs and will help alleviate the time spent within the office and being around other patients. Implementing this technology is our way to help maintain our excellence in eyecare as well as keeping you and the staff healthy. As part of your pre-test work up, we will capture Optomap images for review during your examination today. This procedure is a non covered service unless being used to actively follow disease. The fee for the procedure will be \$44.00. Any questions you have about the Optomap Retinal Exam can be directed to the doctor when Dr. Cassis reviews the images the exam room
