

iWellness Images and OCT-A Information

Vision threatening diseases often have no outward signs or symptoms, so our practice is using state-of-the-art technology to assess the health of your eyes. Our doctors can detect vision threatening and systemic diseases in their very early stages when they are **most treatable**. People of all ages and health levels benefit from having these photos taken. Optomap was originally created for children by a father whose son lost vision in one eye due to a retinal detachment. We have detected conditions that need to be monitored in MANY people who have 20/20 vision or who are not noticing any problems with their vision.

iWellness (Optomap and OCT): Our wellness images include both the iWellness OCT retinal scan and Optomap. The iWellness OCT allows the doctors to view the layers of the retina below the surface image captured by the Optomap. **The doctor wants you to have these tests as part of your annual visit today. The cost is only \$64. It is not covered by insurance.**

Angio iWellness (Optomap, OCT, & OCT-A): If you are suffering from diabetes, high blood pressure, high cholesterol, rheumatological disease, have a family history or diagnosis of age-related macular degeneration, or are age 60+. **The doctor wants you to have these tests as part of your annual visit today. In this bundled package, the OCT-A only costs an additional \$15, for a total of \$79. It is not covered by insurance.**

Yes, I accept the out- of pocket fee and would like to have (PICK ONE):

_____ **iWellness** (routine annual exam)

_____ **Angio iWellness** (annual exam for patients with diabetes, high blood pressure, cholesterol, rheumatological disease, family history or diagnosis of age-related macular degeneration, or age 60+)

- **Most patients do NOT have to be dilated if they have these photos taken. If you have a medical reason to do so, we may recommend both the photos and dilation.**
